## Personal Work

### What2Watch

Web app built with React, Redux, Firebase and the TMDB API. What2Watch showcases movies that are upcoming and playing in theatres, top rated TV shows, and featured trailers. Users can also shuffle through random movies and TV shows at the click of a button, as well as create an account to add items to a watch list.

### Spotify Insight

iOS and Android application built with React Native, Expo and the Spotify Web API. Spotify Insight visualizes a user's data such as top artists, top songs, playlists, recently played songs, and an audio analysis for songs.

### Suture Ease iOS App

iPad app created with Swift and Xcode. Created for the sales representatives at Suture Ease, the app includes videos for device training, brochures, selling aids, and the ability to quickly send out emails with pre-attached documentation enabling sales reps to easily demonstrate products, and get in touch with potential clients.
